

AMENDMENTS TO THE SPECIFICATION

Please currently amend the paragraph on page 14, lines 4-12, as follows:

The first fluorescent material contained in the secondary light source can emit green light when excited by blue light. Preferably, the fluorescent material is composed of at least one member selected from the group consisting of Zn,S:Cu, Au, Al; ZnS:Cu, Al; ZnS:Cu; ZnS:Mn; ZnS:Eu; YVO₄:Eu; YVO₄:Ce; Y₂O₂S:Eu; and Y₂O₂S:Ce. Each fluorescent material including Zn,S:Cu, Au, Al; ZnS:Cu, Al; ZnS:Cu; ZnS:Eu; YVO₄:Ce; and Y₂O₂S:Ce has an absorption spectrum to blue light (from blue to blue-green) and emits green light with a wavelength longer than the excitation wavelength, whereas at least the fluorescent materials of ZnS:Mn; YVO₄:Eu; ~~YVO₄:Ce;~~ and Y₂O₂S:Eu emit red light.
